

CLAIMS

What is claimed is:

1. A drain plunger handle for use with a plunger head, said drain plunger handle comprising:
 - an elongated handle body having a first end and a second end;
 - a first handle member attached to said handle body;
 - a second handle member attached to said handle body, said second handle member attached to said handle body so as to have a vertical offset between said first handle member and said second handle member; and
 - a head connector at said first end of said handle body, said head connector adapted to connect said handle body to said plunger head.
2. The drain plunger handle according to claim 1, wherein said first handle member comprises a first member connector for attaching said first handle member to said handle body.
3. The drain plunger handle according to claim 2, wherein said first member connector comprises means for securing said first member connector to said handle body.
4. The drain plunger handle according to claim 3, wherein said first member connector is slidably disposed on said handle body.

5. The drain plunger handle according to claim 1, wherein said second handle member comprises a second member connector for attaching said second handle member to said handle body.

6. The drain plunger handle according to claim 5, wherein said second member connector comprises means for securing said second member connector to said handle body.

7. The drain plunger handle according to claim 6, wherein said second member connector is slidably disposed on said handle body.

8. The drain plunger handle according to claim 5, wherein said first handle member comprises a first member connector for attaching said first handle member to said handle body.

9. The drain plunger handle according to claim 8, wherein each of said first member connector and said second member connector comprise means for securing said first member connector and said second member connector to said handle body.

10. The drain plunger handle according to claim 9, wherein each of said first member connector and said second member connector are slidably disposed on said handle body.

11. The drain plunger handle according to claim 1, wherein said head connector is configured to removably connect to said plunger head.

12. The drain plunger handle according to claim 11, wherein said head connector comprises a connector body attached to said handle body and a threaded post extending outwardly from said connector body along a longitudinal axis of said handle body, said threaded post adapted to be threadably received in said plunger head.

13. The drain plunger handle according to claim 1, wherein said head connector comprises a connector body attached to said handle body and a threaded post extending outwardly from said connector body along the longitudinal axis of said handle body, said threaded post adapted to be threadably received in said plunger head.

14. The drain plunger handle according to claim 1, wherein said first handle member and said second handle member are substantially in the same vertical plane.

15. A drain plunger handle for use with a plunger head, said drain plunger handle comprising:

an elongated handle body having a first end and a second end;
a first handle member;

a first member connector adapted to attach said first handle member to said handle body;

a second handle member;

a second member connector adapted to attach said second handle member to said handle body, said second handle member attached to said handle body with a vertical offset between said first handle member and said second handle member; and

a head connector at said first end of said handle body, said head connector adapted to connect said handle body to said plunger head.

16. The drain plunger handle according to claim 15, wherein at least one of said first member connector and said second member connector comprises means for securing said first member connector or said second member connector to said handle body.

17. The drain plunger handle according to claim 16, wherein at least one of said first member connector and said second member connector are slidably disposed on said handle body.

18. The drain plunger handle according to claim 15, wherein said head connector is configured to removably connect to said plunger head.

19. The drain plunger handle according to claim 18, wherein said head connector comprises a connector body attached to said handle body and a threaded post extending outwardly from said connector body along a longitudinal axis of said handle body, said threaded post adapted to be threadably received in said plunger head.

20. A drain plunger handle for use with a plunger head, said drain plunger handle comprising:

an elongated handle body having a first end and a second end;

a first handle member;

a first member connector adapted to attach said first handle member to said handle body;

a second handle member generally disposed in the same vertical plane as said first handle member;

a second member connector adapted to attach said second handle member to said handle body, said second handle member attached to said handle body with a vertical offset between said first handle member and said second handle member; and

a head connector at said first end of said handle body, said head connector adapted to removably connect said handle body to said plunger head.
